

## Test Accessories

The secret to having a trouble free fire alarm system is to have the system checked, maintained and serviced regularly.

GLT Exports supply a range of test equipment suitable for most requirements, including smoke detector testing, heat detector testing, and detector removal tools.

Solo smoke test spray is a high quality detector test spray that does not leave any residue in the detectors when they are tested. This means that the detectors do not re-alarm, when the test alarm is reset.

Solo carbon monoxide spray is designed for testing CO detectors. It can be used with the same test equipment as the solo smoke spray

The Zeta BX168 is a hand-held CO gas detector ideally suited for investigating causes of CO.

It gives the ppm reading on it's LCD screen, and has a built in alarm buzzer that sounds at the alarm level.

It has built in rechargeable Ni-MH batteries.

The Zeta JL268 is a portable gas leak detector suitable for industrial uses.

Its flexible "goose-neck" allows the sensor head to be positioned into difficult to access locations to investigate for gas leaks.

It detects Natural gas & LPG, but is available on request for a range of other gasses.
